Prerequisite

Hardware Requirements

- Bellus3D ARC camera
- Windows 10 computer with Intel Core i3, M3 or above processor, 4GB of RAM, 100MB or more of free disk space
 - Tested host PC: Surface Pro 7 and Surface Go 2 M3
- The ARC camera is powered by USB.
- A single ARC camera can be plugged in to your computer's USB3.1 port directly provided that your computer can supply 5V/1.2amp of power. You may need a Type C to USB3.1 Type A female adaptor if your PC doesn't have a USB 3.1 Type A port and only has a Type C port (e.g. Surface Go 2 M3). You will need a powered USB hub if your computer cannot supply sufficient power via USB or you need to connect more than one ARC cameras to your host computer:
 - USB Hub for ARC-4 (4 cameras): 7-port, 35W or more powered adapter
 - USB Hub for ARC-7 (7 cameras): 10-port, 60W or more powered adapter

Software Requirements

Please read Bellus3D ARC User Guide carefully and finish the **installation, launch, sign in and configuration** steps before moving forward.

Sample App

Programming Notes

Sample_App_version folder demonstrates the source code of the sample app.

| | | | |
|--|-------------------|-----------------------|-------|
|  assets | 2/23/2020 9:45 PM | File folder | |
|  lib | 2/23/2020 9:45 PM | File folder | |
|  config.js | 2/23/2020 9:45 PM | JavaScript File | 1 KB |
|  index.css | 2/23/2020 9:45 PM | Cascading Style Sh... | 5 KB |
|  index.html | 2/23/2020 9:45 PM | HTML File | 5 KB |
|  index.js | 2/23/2020 9:45 PM | JavaScript File | 12 KB |

1. Index.html: sample app main page
2. Index.js: contains all the app function call and app logic
3. lib/b3d4api.js: wrap all the websocket commands into js **developer API** (For documentation, please refer to)
4. lib/glTFutils.js: library function used to read glTF
5. lib/modelviewer.js: 3d viewer function used to display glb 3D file

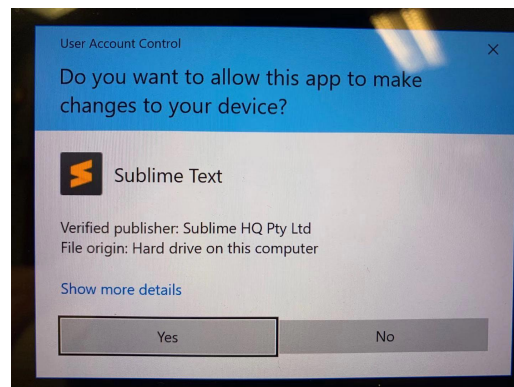

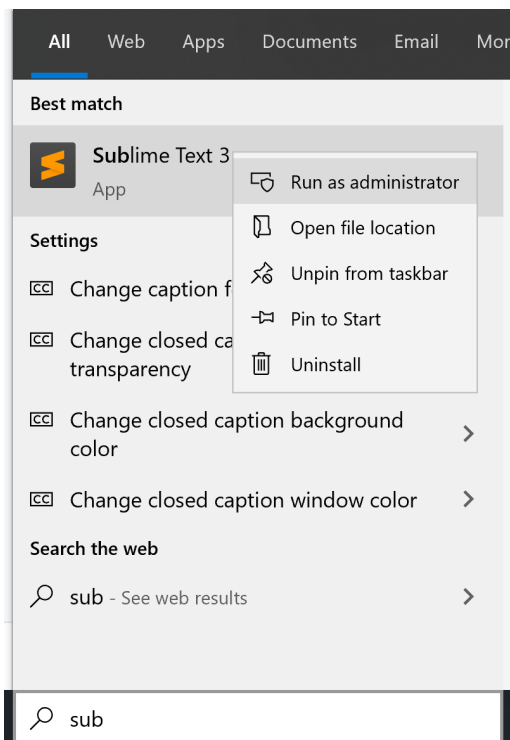

Configuration

In config.js shown in the above image, please fill in client_id and client_secret first. If you put sample app under C drive, Program Files folder, then you need to open this file with *administrator permission**. You can find this information from your Bellus3D developer account. (<https://partner.bellus3d.com/>)

```
credentials: {  
  client_id: "",  
  client_secret: ""  
},
```

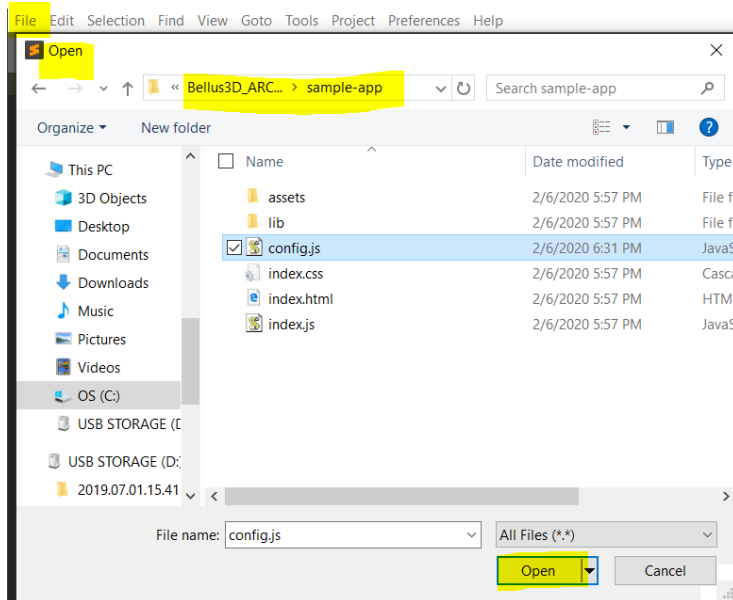

* How to edit a file with administrator permission?

1. For example, with Sublime Text 3 editor (<https://www.sublimetext.com/3>), right click Sublime Text 3, and click **Run as administrator** (If you have Sublime Text 3 editor open already, please close it first, then restart with Run as administrator option).

2. Click **Yes** on the right image above

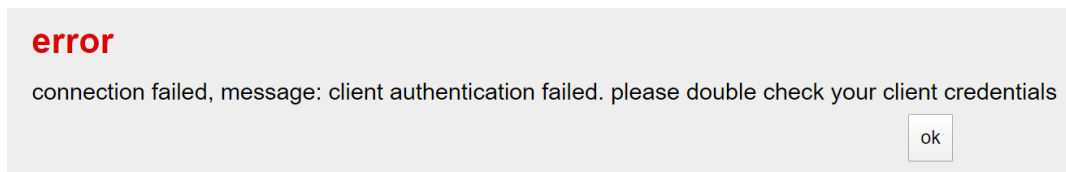

3. Click **File->Open->config.js** from the path above

4. After editing the file, click **File->Save**

Usage

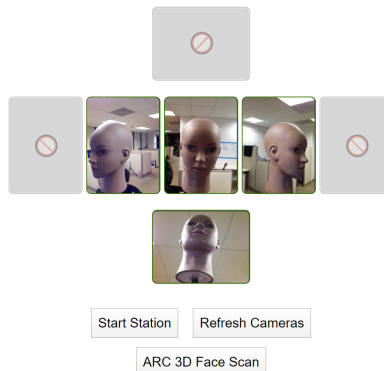

1. Open index.html in a web browser.
2. If you see the error below, please follow the [Configuration](#) step.

3. You will see all the configured cameras' preview.
You can press **Refresh Camera** to refresh the camera preview.
You can press **Start Station** to initialize the station if there is no preview from the cameras. Check the dev API station_start for more details.

Bellus3D ARC Developer's API Sample App

Camera Status

This sample app demonstrates the use of Bellus3D's ARC Developer's API (websocket):

- Preview Streaming
- Scan Recording and Processing
- View GLB Result
- Save Head Model Files

success

connected! server 'ws://127.0.0.1:3003',
session 'F1EC6A441C522B2CED27B631E9E64249',
client 'max'

ok

4. Press **ARC 3D Face Scan** to start a new scan.
5. You will see a red oval in the preview image. Move your face to the center of the oval until it turns green. This means your face is in the desired position for scanning.

Preview Camera

click "preview/pause" to start/stop camera streaming

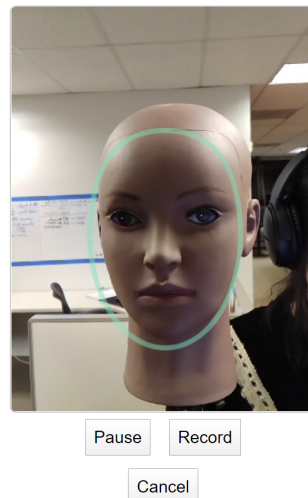

click "record" to start a scan

Preview Camera

click "preview/pause" to start/stop camera streaming

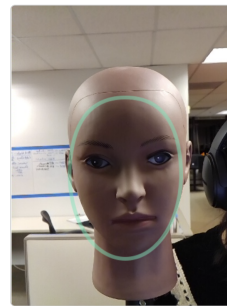

click "record" to start a scan

6. Press the **Record** button to start recording. Currently the sample app will allow scanning to start while the oval is red. But you should have restrictions to only allow scanning to start after the oval turns green.
7. Then you will see a message as shown below. Stay still for 3 seconds until the scan is finished.

Cameras are recording

Please look at the camera and hold still for a few seconds...

Preview Record
Cancel

message

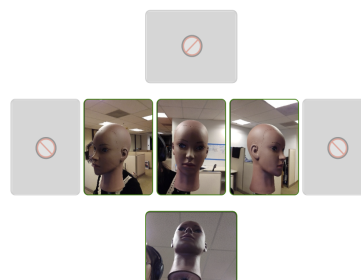

recoding 15 frames of buffer, please hold still...

ok

8. Then you will see a processing page as shown below.

Processing

system is processing the head model...

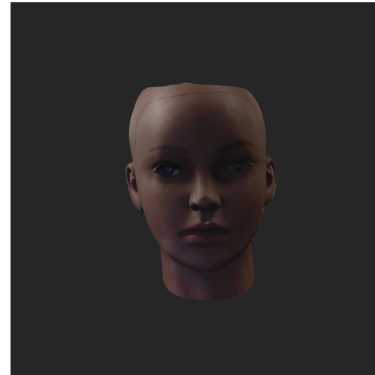

message

processing [Multi-camera stitch complete]...
95%

ok

9. Once processing is done, you will see the scan result in the 3D viewer. You can use your mouse to rotate the model or zoom in and out.

Result

Go Back Save Model

message

head model processed successfull Took 28.08 seconds.
WARNING Cannot find EarClassifier file

ok

10. Press the **Save Model** button to save the current model in the path you entered.

localhost:3001 says

Enter absolute path of folder to save this model, e.g. C:\models

11. The face model file is in obj format by default.
